

The ClassVR Headset: A Closer Look

ClassVR headsets are fully self-contained and easy to use.

Most of the time, students will control the headsets using gestures, but there are some buttons on the sides too. At the left of the headset, you'll find a few simple buttons.

In the centre of the circle is the **power button**. To turn the headset on, press and hold this button for five seconds. To turn it off again, press and hold for ten seconds.

Towards the front of the headset, on the outer ring of buttons, is the **back button**. When pressed, this will allow students to leave a 360 experience (unless the headset is being stepped through a Playlist remotely by the teacher via the ClassVR Portal).

The buttons above and below the power button are used to turn the headset **volume up and down**.

At the right of the headset you will find a touch panel. Slide a finger across this panel to move the selected area, and tap it to select.

Let's take a look at the underside of the headset.

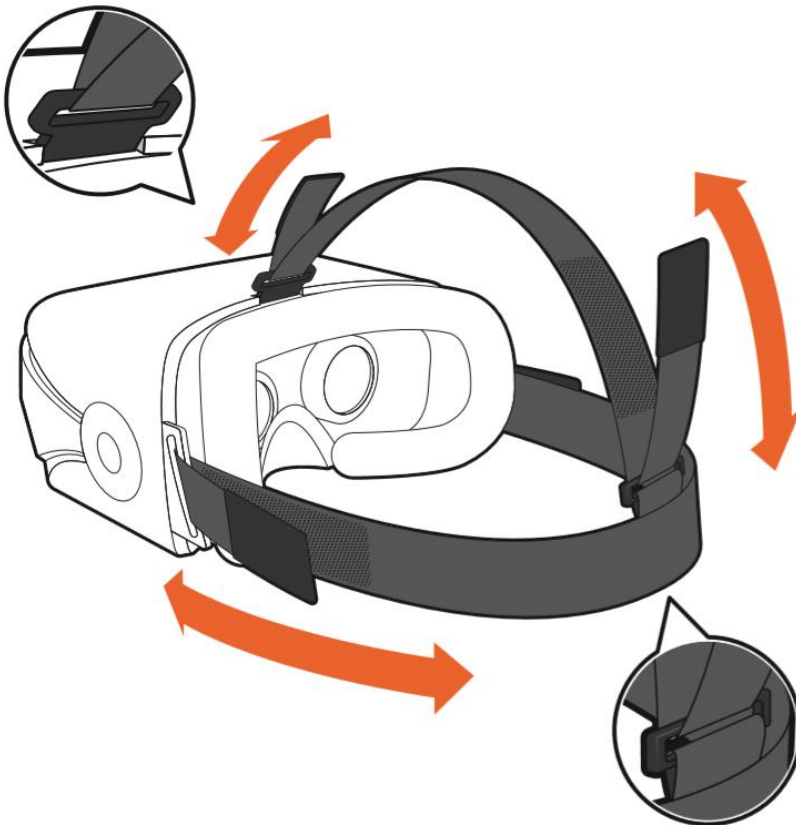

At the left and right are the integrated speakers.

Towards the front of the headset are a range of ports and other features. Some of these are useful day to day, including:

- The 2mm headphone jack – great for immersing students fully in 360 video experiences.
- The micro USB port, used for charging.
- The charging light, which is illuminated in blue when the device is drawing charge.

Your headset comes with some features that are designed to make it comfortable for students of all ages.

The face padding can be wiped clean and is removable. To reposition the padding, gently peel it away from the hook and loop fastening tape. Simply replace the padding in the desired position.

If you are using straps with your headset, pass the end through the slot at the side and use the hook and loop fastening to hold it in place. Repeat this on the other side. The straps are adjustable at the sides and over the crown of the head; make sure they are fastened securely for each student to make the headset comfortable.
