

## Sending a Playlist for Independent Exploration

In addition to stepping your class through a guided session, ClassVR also gives you the capability to send collections of 360 experiences to your students to explore independently.

To do this, create a Playlist in the ClassVR Portal. When you're happy with it, click the 'paper plane' icon at the bottom to send this Playlist to the headsets.

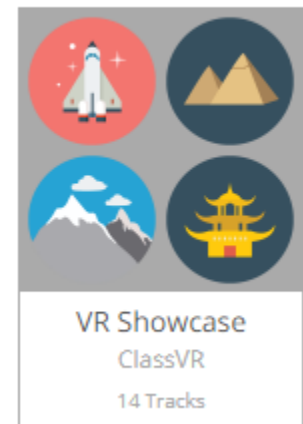

Your students will now be able to navigate through this set of experiences using the gesture controls.

Remember, this replaces the selection that was loaded onto the headsets before you sent the command.

If you'd like to return your students to the choice of experiences that is available when the headsets are first delivered, simply search for the VR Showcase collection in the ClassVR Library.

Drag and drop this collection onto the Playlists pane and use the 'paper plane' button to send it to the headsets again.

### Collections

You can also switch the content available to students by scanning QRKeys that are printed on the lesson plans, downloadable from the ClassVR Portal.
