

Using QRKeys to Explore Content Independently

In student-directed mode, your students can use gesture controls to select from a range of experiences.

You can change the collection of experiences available to them in two ways:

1. Send a Playlist from the ClassVR Portal.
2. Scan a QRKey from one of our ClassVR lesson plans.

To find the QRKey, locate the lesson plan you need; these can be downloaded from the Portal.

Using gesture controls from within the headset, select the Scanner icon.

You will see a camera window appear, surrounded by a grey grid pattern. Look through the camera at the QRKey on the front of the lesson plan, in the bottom left.

When you see the screen turn green or hear a beep, the headset has recognised the QRKey.

The icons available on the menu screen will change – your new collection has been loaded for independent exploration.
