

Adding Your Own 360 Content

If you have created 360 images or videos of your own, it's really easy to access them on your ClassVR headsets. Equirectangular JPG images or equirectangular MP4 videos work best.

Start in the Plan area of the ClassVR Portal. In the Libraries pane on the right, click ClassCloud.

There are two ways to upload your file:

1. Click the Upload button and navigate to the file on your computer. Select the file and click Open.
2. Drag and drop the file from a folder on your computer directly onto the central pane.

A green upload bar will appear. Once the upload is complete, simply drag and drop the thumbnail image into your Playlist.
